

Kevin Tayah

Senior Software Engineer

[Github](#) | [Website](#) | [LinkedIn](#) | kevintayah@gmail.com | 267.546.7901. | Philadelphia PA, USA

Profile

Lead Software Engineer with eight years of experience building production backend systems and data platforms in FinTech and healthcare. Founding engineer at WithBelay through seed stage and lead engineer at Ethermed.AI from pre-seed through Series A, building AI workflow systems, large-scale data integration pipelines, and internal platforms for healthcare automation.

Skills

- **Programming Languages:** Elixir, HTML, CSS, JavaScript, Erlang, Python, Rust
- **Frameworks:** Phoenix, React, Redux, React Native, Svelte, Node.js
- **Tools:** RabbitMQ, Postgres, Kubernetes, Docker, Terraform, MongoDB, OpenTelemetry, Grafana, Git, Github Actions, FFMPEG, Tilt, Langfuse

Employment History

Lead Software Engineer at Ethermed, Remote

June 2024 - Present

Skills and technologies: Elixir, Phoenix LiveView, Python, Postgres, RabbitMQ, Docker, Kubernetes, Terraform, Terragrunt, HTML, CSS, Javascript, Azure, OpenAI, Anthropic

Key Contributions:

- **Led development and technical direction of an AI-powered medical prior authorization platform used by 10+ clients, automating medical policy search and approval probability across a pool of 270k medical policies.**
- **Architected and built AI-powered medical policy scraping, extraction, and normalization systems, and established reusable engineering patterns that enabled parallel development across the team allowing the platform to scale up to ~270k policies and meet multiple client integration deadlines.**
- Owned the medical policy matching and retrieval systems, improving matching accuracy by ~75% through iterative improvements to retrieval, ranking, and evaluation pipelines using production data and benchmarking.
- Reduced LLM usage costs by 50% by designing reusable processing workflows and batch processing patterns using Anthropic batch APIs for large-scale document extraction.
- Designed and delivered internal self-service tooling that allowed client integration specialists to manage policy matching logic, onboarded new clients, and adapt to diverse client data formats that ensured integration delivery.
- Mentored engineers through design reviews, pair programming, and code reviews, and helped grow the engineering team from 2 to 10 engineers through interviewing and onboarding.
- Collaborated with product managers, client integration teams, and external clients to define requirements, resolve integration challenges, and guide technical implementation decisions.
- Worked with DevOps to design and manage infrastructure and deployments using Terraform and Azure infrastructure, and owned the deployment process through staging and production until stabilization.
- Contributed security improvements to the open-source Azure library by implementing managed identity authentication.

Senior Software Engineer at WithBelay, Philadelphia

December 2021 - May 2024

Skills and technologies: Elixir, Phoenix, RabbitMQ, Postgres, Docker, Kubernetes, Terraform, HTML, CSS, JavaScript, Rust

Key Contributions:

- Instrumental in securing a seed round of ~\$5M in funding through the development of robust backend systems, demonstrating the viability and potential of the product to investors.
- Led the development of a high-performance distributed micro-service which leveraged Elixir to track and stream data pertaining to over 10K stocks and their option chains, ensuring real-time data availability and accuracy for financial operations.
- Independently spearheaded the implementation and owned critical features including user authentication, automatic PDF and email generation, seamless user bank account access, secure ACH payment transfers, and cross-service observability, enhancing the user experience and operational efficiency.
- Expanded feature sets of three critical Elixir open-source libraries to align with company goals

Senior Software Engineer at Wolf Financial, Philadelphia

June 2020 - December 2021

Skills and technologies: React Native, Node.js, MongoDB, Firebase, FFMPEG, D3.js, Jest, AWS Elastic Beanstalk

Key Contributions:

- Organized and planned features between CEO and Head of Design which lead to acquiring angel investments totaling up to \$750,000 and growing its user base by 400%.
- Contributed to 35% of code-base by implementing core social media features like posting and/or viewing images, videos, text, polls, and stock charts on a shared feed.
- Managed and mentored 3 developers, to insure efforts were meeting business goals

Projects

Azurex

March 2025 - Present

Skills and technologies: Elixir, Azure

- Enhanced Azurex, an Elixir client library for Azure REST APIs, by adding support for Microsoft Azure's recommended authentication method and SAS token generation, enabling secure and standards-compliant access to Azure Blob Storage.

TypedStructDataFrame

January 2024 - April 2024

Skills and technologies: Elixir

- An open-source Elixir library which provide macros that define helper functions to parse and/or generate data-structures with the intent for data science and/or large data exploration

Education

Drexel University at Philadelphia, PA

September 2016 - June 2021

BS in Computer Science

Concentration in Artificial Intelligence, Data Structures, and Algorithms
